

Solair

Dear Residents,

With Summer upon us I wanted to take a moment and review some electricity tips. During this time of year, we should plan for power outages (surges), increased electricity rates, and ways to be prepared for them. Electricity costs are higher during peak usage times. You can save money and help prevent power surges by adjusting your thermostat to 78 degrees, turning off unnecessary lights, and using major appliances late in the evenings or early in the mornings. Please see the below information from the Los Angeles Department of Water and Power regarding rates.

Thank you,
Brian Barr
General Manager

Time-of-Use Rates

Time-of-Use rates are based on the time of day that you use electricity. During the base hours, when customer use is low, your price will be lower than the standard (non-Time-of-Use) residential rate. Prices during the low peak hours are slightly higher than the standard rate. In the high peak hours, the cost to supply energy is the highest, and it will cost more than the standard rate.

High Peak Period (20 hours per week)	Monday through Friday 1:00 p.m. - 4:59 p.m.
Low Peak Period (30 hours per week)	Monday through Friday 10:00 a.m. - 12:59 p.m. 5:00 p.m. - 7:59 p.m.
Base Period (118 hours per week)	Monday through Friday 8:00 p.m. - 9:59 a.m. All day Saturday and Sunday
