

# MONTHLY MAINTENANCE REMINDER

## Washer Maintenance

Make sure to check your washer's hot and cold water supply lines when running your washer. Things to look for:

- Water drips or slow leaks along the hose and connection points.
- Water puddling around the washer.

If you notice any potential leaks:

- Immediately turn off the water valves.
- Contact your licensed plumber and/or appliance technician.

Washer hoses should be replaced every 3 to 5 years. When changing them, you should opt for a stainless steel braided hose.
